Summary

Creative problem-solver and technically adept professional thriving in collaborative environments. With extensive experience across SaaS startups and enterprise integrations, I specialize in architecting AI-driven and agentic solutions that combine scalability, automation, and customer-centric design.

Experience

OBSERVE.AI

Integration Lead | 03/2020 – Present

- Architected and implemented enterprise-grade integrations between Observe's AI platform and customer systems — including CRMs, collaboration tools, and cloud data platforms (AWS, GCP, Azure).
- Led solution design and architecture reviews with product and engineering teams to deliver scalable, customer-specific implementations.
- Worked on building internal agentic tools using the MCP framework and RAG workflows, exploring multi-agent flows and Mixture of Experts (MoE) architectures through practical implementation and experimentation
- Acted as a trusted technical advisor, translating complex integration challenges into actionable workflows for enterprise customers.
- Leveraged distributed systems and automation frameworks (n8n, Paragon iPaaS) to accelerate deployment cycles and reduce manual intervention.
- Partnered with Customer Success and Engineering teams to drive adoption and ensure successful go-live for enterprise customers with ARR ranging from \$100K to \$5M.
- Defined and enforced integration best practices, documentation standards, and reusable templates to streamline delivery.
- Proactively identified system bottlenecks, monitored integration health, and implemented optimizations to ensure reliability and scalability.

Solution Engineer | 07/2019 – 03/2020

- Worked as a software integration engineer in the customer experience team, building tools for on-boarding and integration of customers.
- Delivered high-quality product experiences while collaborating with customer and third-party teams.
- Drove implementation planning, troubleshooting, and integration execution with cross-functional teams.

BLOOMREACH

Solution Engineer | 09/2017 – 06/2019

- Served as the primary technical owner ensuring customer success through integrations with Bloomreach products.
- Analyzed configurations, logs, and application data to resolve issues efficiently.
- Standardized escalation processes and assisted other solution teams in technical delivery.

LTI

Software Engineer | 11/2014 – 08/2017

- Provided technical solutions for CITI applications and acted as a client-facing liaison for issue resolution.
- Developed technical documentation to improve onboarding and knowledge sharing.

Skills

Technical Expertise

- Python, JavaScript, React, APIs, Web Technologies, Snowflake, Databases (SQL/NoSQL)
- Cloud Platforms: AWS, GCP, Azure
- Distributed Systems: Docker, Kubernetes
- Data Integration & Pipelines, REST & GraphQL APIs, ETL/ELT workflows

AI & Automation

- Agentic Workflows, Multi-Agent Systems, Mixture of Experts (MoE)
- AI/ML Workflow Integration, Prompt Engineering, Automation Frameworks (n8n, zapier)

Solution Design & Delivery

- Solution Architecture, Enterprise Integrations, System Design
- Customer Implementations, Pre-Sales Demos, Proofs of Value (PoVs)

- Observability, Scalability, and Performance Optimization

Professional Skills

- Strong Communication & Stakeholder Management and easy to work with
- Analytical Problem Solving & Critical Issue Handling
- Ownership, Collaboration, and Time Management

Education

MEDICAPS INSTITUTE OF TECHNOLOGY AND MANAGEMENT

Bachelor of Engineering | 2014

Awards

Certificate of Appreciation - UNBXD

Received multiple recognitions including the “Power of Customer” award for outstanding performance and dedication to customer success.
